Art Unit: 2623

DETAILED ACTION

Miscellaneous

1. Please note that the examiner for this application has changed.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 04/10/07 has been considered.

Election/Restrictions

3. Applicant's election with traverse of group I, in the reply filed on 1/24/07, is acknowledged. The traversal is on the ground(s) that the restriction "makes no effort to show a serious burden would be placed on the examiner if restriction were not required." This is not found persuasive as paragraph 5 of the restriction, mailed 12/26/06, *specifically indicated* the restriction was proper due to the differing search required. For example, groups III and IV, are directed to distinctive memory and queue management features, which require different search and search queries then the elected group.

The requirement is still deemed proper and is therefore made FINAL.

Claim Objections

4. Claim 14 is objected to because of the following informalities:

Art Unit: 2623

In claim 14, line 18, "the predetermined threshold" should be changed to --a predetermined threshold-- as there is no prior recitation of this limitation within the claim.

Appropriate correction is required.

Response to Arguments

5. Applicant's arguments with respect to claims 11-14 and 16-19 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 11-14 and 16-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zigmond et al. (Zigmond) (6,698,020) in view of Knee et al. (Knee) (US 2002/0095676 A1) (of record).

As to claim 14, Zigmond discloses a method for broadcasting and displaying advertisements (column 4, lines 8-15), comprising:

receiving program guide data (column 10, line 64-column 11, line 13) and advertising data (column 12, lines 15-32), wherein the program guide data includes program attribute information identifying content of each of a plurality of television programs (column 10, line 64-column 11, line 13 and column 12, line 60-column 13, line

13) and wherein the advertising data includes a plurality of advertisements (column 12, lines 15-32 and column 17, lines 10-20) and advertisement attribute information identifying content of each of the plurality of advertisements (advertisement parameters; column 12, lines 15-32 and column 11, lines 35-48);

maintaining a selection history that includes program attribute information identifying content of television programs selected by a user (stored viewing history; column 11, lines 13-30).

While Zigmond discloses performing, for each of the plurality of advertisements (column 17, lines 10-20), a comparison between the advertisement attribute information and the selection history (column 11, lines 17-49 and column 17, lines 10-20);

discarding advertisements having a value less than or equal to a predetermined threshold value (discarding ads determined to not match the viewer; column 15, lines 17-23 and column 17, lines 10-20); and

displaying a set of advertisements from the plurality of advertisements based on the value (displaying ads which are determined to match the viewer's program history; column 11, lines 31-65 and column 17, lines 21-32), he fails to specifically disclose calculating a similarity score for each of the advertisements, discarding advertisements having a similarity score less than or equal to the threshold and displaying the advertisements based upon the similarity scores.

In an analogous art, Knee discloses a method for selecting advertisements (paragraph 10; Fig. 5) which compares a users selection history (paragraph 35, 36 and 50) and advertisement attribute information (ad values; paragraphs 46, 47 and 50) to

calculate a similarity score for the advertisement (calculating a "closeness" score to identify which ads of a plurality most closely match the viewer; paragraph 47) and displaying the advertisements based upon the similarity score (displaying the "best match" ads; paragraph 47 and 50), wherein advertisements having a similarity score less than or equal to a threshold are discarded (wherein the advertiser determines minimum values which must be met to display the ad; paragraph 32), for the typical benefit of providing a systematic approach to targeting ads and identifying the best to display to the user, based upon user history and ad criteria (paragraphs 7, 47 and 50).

It would have been obvious to one of ordinary skill in the art at the time of invention by applicant to modify Zigmond's system to include calculating a similarity score for each of the advertisements, discarding advertisements having a similarity score less than or equal to the threshold and displaying the advertisements based upon the similarity scores, as taught by Knee, for the typical benefit of providing a systematic approach to targeting ads and identifying the best to display to the user, based upon user history and ad criteria.

As to claim 16, Zigmond and Knee disclose storing the advertising data by determining if each of the plurality of advertisements received has a similarity score greater than an advertisement from the set of advertisements (only storing and utilizing the most best matching ads; see Zigmond at column 15, lines 17-23, column 17, lines 10-20 and Knee at paragraph 47).

Art Unit: 2623

As to claim 17, Zigmond and Knee disclose storing the advertising data in a memory if the memory has sufficient space to store each of the plurality of advertisement (see Zigmond at column 15, lines 17-23).

As to claim 18, Zigmond and Knee disclose storing the advertising data beyond a lifetime associated with the advertisement when the advertisement has a similarity score greater than a predetermined threshold similarity score (wherein a previously selected ad has been recorded and is now obsolete; see Zigmond at column 14, lines 1-13).

As to claim 19, Zigmond and Knee disclose wherein displaying the set of advertisements from the plurality of advertisements includes selecting advertisement images associated with each of the plurality of advertisements (see Zigmond at column 9, lines 9-20) based on the similarity scores for each of the plurality of advertisements (see Zigmond at column 17, lines 21-32 and Knee at paragraph 47) and displaying the selected advertisement images (see Zigmond at column 17, lines 21-32 and Knee at paragraph 47).

As to claim 11, Zigmond and Knee disclose wherein displaying the set of advertisements from the plurality of advertisements based on the similarity score includes repeating the display of the advertisement from the set of advertisement at a

Art Unit: 2623

frequency (see Zigmond at column 13, lines 40-47) based on the similarity score of the advertisement (determining if the ad is displayed; see Knee at paragraph 47).

As to claim 12, Zigmond and Knee disclose wherein displaying the set of advertisements from the plurality of advertisements based on the similarity score includes prioritizing the advertisements within the set of advertisements for display based on the similarity scores of the advertisements within the set of advertisements (wherein the order of display for the ads is based upon a "best match" calculation for each ad; see Knee at paragraph 47) and displaying the advertisements within the set of advertisements in order of priority (wherein the highest priority or "best match" for each successive ad slot is selected and displayed; see Zigmond at column 21-49 and Knee at paragraph 47).

As to claim 13, Zigmond and Knee disclose wherein displaying the set of advertisements from the plurality of advertisements based on the similarity score includes displaying advertisements having a similarity score greater than a predetermined threshold score (wherein advertisements which do not exceed the threshold are discard and never displayed; see Zigmond at column 17, lines 10-20 and Knee at paragraph 32).

Conclusion

Art Unit: 2623

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

9. The following are suggested formats for either a Certificate of Mailing or Certificate of Transmission under 37 CFR 1.8(a). The certification may be included with all correspondence concerning this application or proceeding to establish a date of mailing or transmission under 37 CFR 1.8(a). Proper use of this procedure will result in such communication being considered as timely if the established date is within the required period for reply. The Certificate should be signed by the individual actually depositing or transmitting the correspondence or by an individual who, upon information and belief, expects the correspondence to be mailed or transmitted in the normal course of business by another no later than the date indicated.

Certificate of Mailing

Commissioner for Patents

I hereby certify that this correspondence is being deposited with the United States Postal Service with sufficient postage as first class mail in an envelope addressed to:

P.O. Box 1450 Alexandria, VA 22313-1450	
on (Date)	
Typed or printed name of person signing this certificate:	

Art Unit: 2623

Signature:
Registration Number:
Certificate of Transmission
I hereby certify that this correspondence is being facsimile transmitted to the United States Patent and Trademark Office, Fax No. () on (Date)
Typed or printed name of person signing this certificate:
Signature:
Registration Number:

Please refer to 37 CFR 1.6(d) and 1.8(a)(2) for filing limitations concerning facsimile transmissions and mailing, respectively.

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to James Sheleheda whose telephone number is (571) 272-7357. The examiner can normally be reached on 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chris Kelley can be reached on (571) 272-7331. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
